

Chapters	Contents	Page No
1	Basic Thermodynamics and Gas Dynamics	1
	1.1. Introduction	1
	1.2. Properties, Units and Dimensions	1
	1.3. Process and Cycle	3
	1.4. Thermodynamics Law	5
	1.5. Entropy and Enthalpy	6
	1.6. Mach Number	7
	1.7. Sonic Velocity (a)	7
	1.8. Compressibility	9
	1.9. Stagnation Properties	11
	1.10. Various Regions of Flow	13
	1.11. Stagnation Velocity of Sound	14
	1.12. Maximum Fluid Velocity	15
	1.13. Critical Velocity of Sound	15
	1.14. Bernoulli Equation	16
	1.15. Effect of Mach Number on Compressibility	17
	1.16. Mach Waves	18
	Worked Examples	21
	Summary	25
	Review Questions	26
	Objective Questions	27
	Exercise Problems	28
2	Isentropic Flow through Variable Area	29
	2.1. Basic Equation	29
	2.2. Mass Rate of Flow and Critical Pressure Ratio	31
	2.3. Critical Values	33
	2.4. Impulse Function	36
	Worked Examples	39
	Summary	64
	Review Questions	65
	Objective Questions	66

Chapters	Contents	Page No
	Exercise Problems	68
3	Flow Through Ducts of Constant Area	70
	3.1. Introduction	70
	3.2. Rayleigh Flow (Flow with Heat Transfer)	70
	3.3. Flow Properties Referred to Critical State	74
	3.4. Fanno Flow (Flow with Friction)	78
	Worked Examples	86
	Rayleigh Flow	86
	Fanno Flow	97
	Summary	110
	Review Questions	111
	Objective Questions	113
	Exercise Problems	117
4	Normal and Oblique Shocks	118
	4.1. Normal Shock	118
	4.2. Prandtl–Meyer Relations	122
	4.3. Property Relationship	125
	4.4. Conditions for Shock to Occur	129
	4.5. Oblique Shocks	130
	4.6. Prandtl Equation	132
	4.7. Ranking Hugoniot Equation	133
	4.8. Deflection Angle	133
	4.9. Use of Gas Tables	134
	4.10. Generalized Gas Dynamics	135
	4.11. Pressure Ratio Function (P)	136
	4.12. Application of Gamma Function	138
	Worked Examples	140
	Summary	168
	Review Questions	169
	Objective Questions	171
	Exercise Problems	173

Chapters	Contents	Page No
5	Jet Population	176
	5.1. Ideal Jet Propulsion Cycles	176
	5.2. Specific Thrust	178
	5.3. Propulsive Power (Pp)	179
	5.4. Input Energy	179
	5.5. Thermal Efficiency	179
	5.6. Propulsive Efficiency	179
	5.7. Overall Efficiency	180
	5.8. Different Types of Jet Engines	181
	Worked Examples	185
	Summary	203
	Review Questions	204
	Exercise Problems	205
6	Space Propulsion	207
	6.1. Introduction	207
	6.2. Comparison between Jet Engines and Rocket Engines	209
	6.3. Classification of Rocket Engine	209
	6.4. Liquid Propellant Rocket	210
	6.5. Liquid Propellants	211
	6.6. Solid Propellant Rocket	215
	6.7. Solid Propellants	216
	6.8. Hybrid Propellant Rocket	221
	6.9. Comparison between Solid and Liquid Propellant Propulsion System	222
	6.10. Propellant Fuel System	223
	6.11. Applications of Rocket Engines	224
	6.12. Rocket Propulsion Theory	227
	6.13. Milestones	234
	Worked Examples	237
	Summary	243
	Review Questions	244
	Objective Questions	246

Chapters	Contents	Page No
	Exercise Problems	247
	Two Marks Questions and Answers	248
	Model Question Paper	265
	Appendix	280
