

Chapters	Contents	Page No
1	Introduction to Software Testing	1
	1.1. Testing as an Engineering Activity	1
	1.2. Role of Process in Software Quality	2
	1.3. Testing as a Process	2
	1.4. Basic Definitions	4
2	Testing Fundamentals	8
	2.1. Software Testing Principles	8
	2.2. Testers Role in a Software Development Organisation	11
	2.3. Testing Versus Debugging	11
3	Defect Classes and Defect Repository	12
	3.1. Defects	12
	3.2. Defect Classes, the Defect Repository, and Test Design	12
	3.3. Developer/Tester Support for Developing a Defect Repository	15
4	Test Case Design	17
	4.1. Introduction	17
	4.2. The Smart Tester	17
	4.3. Test Case Design Strategies and Techniques	18
	4.4. Using the Black Box Approach to Test Case Design	18
5	Black Box Test Case Design Techniques	20
	5.1. Random Testing	20
	5.2. Equivalence Class Partitioning	20
	5.3. Boundary Value Analysis	24
	5.4. Cause and–Effect Graphing	29
	5.5. Black Box Testing and Commercial Off-the-Shelf(Cots) Components	32

6	White Box Test Case Design Techniques	34
	6.1. Different Methods used in the White Box Testing Strategies	34
	6.2. Test Adequacy Criteria	34
	6.3. Decision (or) Branch Coverage	35
	6.4. Data Flow Testing	36
	6.5. Control Flow Testing/Coverage	36
	6.6. Mccabe's Cyclomatic Complexity (or) Independent Path (or) Basis Path Coverage	37
	6.7. Mutation Testing	38
	6.8. Evaluate Test Selection/Adequacy/Coverage/Stop Criteria	39
7	Levels of Testing-Unit Testing	50
	7.1. Introduction	50
	7.2. Unit Testing	50
	7.3. Unit Test Planning	51
	7.4. Designing the Unit Tests	52
	7.5. Unit Test on Class / Objects	52
	7.6. The Test Harness	54
	7.7. Running the Unit Tests and Recording Results	54
8	Levels of Testing-Integration Testing	56
	8.1. Integration Testing	56
	8.2. Design an Integration Test	56
	8.3. Integration Test Planning	58
9	Levels of Testing-System Testing	60
	9.1. Several Types of System Tests	60
	9.2. Functional Testing	60
	9.3. Performance Testing	61
	9.4. Configuration Testing	61
	9.5. Security Testing	62
	9.6. Recovery Testing	63
	9.7. Acceptance Test, Alpha and Beta Testing	64

10	Testing Goals and Test Planning	65
	10.1. Introduction	65
	10.2. Testing and Debugging Goals and Policies	65
	10.3. Document Types (The IEEE Standard 829-1998)	68
	10.4. Test Planning	69
	10.5. Test Plan Components/Contents (The IEEE Standard 829-1998)	71
	10.6. Test Cost Estimation Methods	73
	10.7. Test Plan Attachments	76
	10.8. Locating Test Items: Test Item Transmittal Report (The IEEE Standard 829-1998)	77
11	Test Reports	78
	11.1. Reporting Test Results	78
	11.2. The Role of the Three Critical Groups in Testing, Planning and Test Policy Development	80
	11.3. Process and the Engineering Disciplines	82
12	The Test Organization	84
	12.1. Introducing the Test Specialist	84
	12.2. Skills Needed by a Test Specialist	85
	12.3. Building a Testing Group	86
	12.4. The Structure of the Test Group	86
13	Controlling and Monitoring	89
	13.1. Introduction	89
	13.2. Measurements and Milestones for Monitoring and Controlling	90
	13.3. Measurements for Monitoring Testing Status	92
	13.4. Measurements to Monitor Tester Productivity	95
	13.5. Measurements for Monitoring Testing Costs	95
	13.6. Measurements for Monitoring Error, Faults, and Failures	96
	13.7. Monitoring Test Effectiveness	97

	13.8. Status Meetings, Reports, and Control Issues	98
	13.9. Criteria for Test Completion	101
	13.10. Software Configuration Management	102
14	Software Reviews	106
	14.1. Introduction	106
	14.2. Types of Reviews	107
	14.3. Types of Reviews According to Formalit	108
	14.4. Reviews and Testing	110
	14.5. Technical and Management Reviews	110
	14.6. Components of a Review Plan	110
	14.7. Checklist for Reviewing	115
	14.8. Reporting Review Results	119
