

## TABLE OF CONTENTS

CHAPTER NO	TITLE	PAGE NO
<b>1</b>	<b>Introduction</b>	<b>01</b>
	1.1. Introduction	01
	1.2. Brief Insight into Additive Manufacturing	02
	1.3. History of Additive Manufacturing Process	03
	1.4. Comparison between Additive and Conventional Manufacturing Process	05
	1.4.1. Creating Complex Geometries	05
	1.4.2. Material Wastage	06
	1.4.3. Customization of Product	06
	1.4.4. Difference in Equipment Required	06
	1.4.5. Differences in Business Model	07
	1.4.6. Different Manufacturing Model	07
	1.5. Advantages and Drawbacks of Additive Manufacturing Process	08
	1.5.1. Advantages of Additive Manufacturing	09
	1.5.2. Disadvantages of Additive Manufacturing	11
	1.6. Applications of Additive Manufacturing	12
<b>2</b>	<b>APPLICATIONS OF ADDITIVE MANUFACTURING</b>	<b>16</b>
	2.1. Classification of Additive Manufacturing	16
	2.2. VAT Photo Polymerization	17
	2.2.1. Working Principle	17
	2.2.2. Materials Used	18
	2.2.3. Applications	18

	2.3. Material Extrusion	19
	2.3.1. Working Principle	19
	2.3.2. Materials Used	21
	2.3.3. Applications	21
	2.4. Powder Bed Fusion	21
	2.4.1. Working Principle	21
	2.4.2. Materials Used	23
	2.4.3. Applications	23
	2.5. Material Jetting	24
	2.5.1. Working Principle	24
	2.5.2. Types of Material Jetting	25
	2.5.3. Material Used	27
	2.5.4. Applications	27
	2.6. Binder Jetting	28
	2.6.1. Working Principle	28
	2.6.2. Post Processing Steps in Binder Jetting Process	29
	2.6.3. Material Used	30
	2.6.4. Applications	30
	2.7. Direct Energy Deposition	31
	2.7.1. Working Principle	31
	2.7.2. Materials Used	32
	2.7.3. Applications	33
	2.8. Sheet Lamination	33
	2.8.1. Working Principle	33
	2.8.2. Materials Used	34
	2.8.3. Applications	34

<b>3</b>	<b>FUSED DEPOSITION MODELLING</b>	<b>35</b>
	3.1. Introduction to Fused Deposition Modeling [FDM]	35
	3.2. Working Principle of Fused Deposition Modeling	36
	3.3. Parts of a FDM 3D Printer	37
	3.3.1. Extruder	37
	3.3.2. Types of Extruder	41
	3.3.3. Structure	42
	3.3.4. Printing Surface	47
	3.3.5. Electronics	48
<b>4</b>	<b>MATERIALS USED IN FUSED DEPOSITION MODELING</b>	<b>50</b>
	4.1. Introduction to Filament Materials	50
	4.2. Properties of Polymers for FDM	50
	4.3. Materials Used in FDM	52
	4.3.1. Polylactic Acid (PLA)	52
	4.3.2. Acrylonitrile Butadiene Styrene (ABS)	53
	4.3.3. Polycarbonates (PC)	55
	4.3.4. Polyethylene Terephthalate (PET)	57
	4.3.5. PETG	59
	4.3.6. Thermoplastic Polyurethane (TPU)	61
	4.3.7. Acrylonitrile Styrene Acrylate (ASA)	63
	4.3.8. ULTEM	64
<b>5</b>	<b>RESEARCH TRENDS IN FDM OF THERMOPLASTIC POLYMERS - ABS</b>	<b>67</b>
	5.1. Introduction to Thermoplastic Polymers	67
	5.2. Acrylonitrile Butadiene Styrene Polymer in FDM	68

	5.2.1. Raster Width	68
	5.2.2. Air Gap	69
	5.2.3. Model Build Temperature	69
	5.2.4. Raster Orientation	70
	5.3. FDM Printed ABS Parts	70
	5.4. Injection Molds Vs FDM Printed ABS Part	72
	5.4.1. Tensile Test	72
	5.4.2. Shear Test	74
	5.4.3. Compression Test	76
	5.4.4. Flexural Test	77
	5.4.5. Thermo Gravimetric Analysis (TGA)	79
<b>6</b>	<b>RESEARCH TRENDS IN FDM OF THERMOPLASTIC POLYMER - PLA</b>	<b>80</b>
	6.1. Introduction	80
	6.2. 3D Printing of PLA Composites through Fused Deposition Modeling	81
	6.3. Other Directions in 3D Printing of PLA based Materials	82
	6.4. Influence of Polymer Formulation on the Printing Quality and Mechanical Properties	84
	6.4.1. Rheological Properties of PLA Filaments	85
	6.5. Surface Quality in FDM Process	86
	6.5.1. Experimental Plan	89
	6.5.2. Surface Roughness Evaluation	90
	6.5.3. Experimental Findings	90

	6.6. Tensile Properties of PLA Specimen	91
	6.6.1. Material and Manufacturing Process	91
	6.6.2. Tensile Test	92
	6.6.3. Experimental Work Findings	93
	6.7. Compression Test of PLA Specimen	93
	6.7.1. Specimens for Compression Test	94
	6.7.2. Results for Compression Test	95
<b>7</b>	<b>RESEARCH TRENDS IN ULTEM POLYMER</b>	<b>98</b>
	7.1. Introduction	98
	7.2. Materials	98
	7.3. Density	99
	7.4. Tensile Test	100
	7.5. Effect of Build Parameters	103
	7.5.1. Specimen Details	103
	7.5.2. Design of Experiments – Factors and Levels	103
	7.5.3. Effect of Build Style and Temperature	104
	7.5.4. Effects of Build Direction, Raster Angle and Air Gap	106
	7.5.5. Effect of Build Direction and Raster Angle	107
	7.5.6. Effect of Air Gap	109
	7.6. Compression Test	110
	7.7. Flexural Behavior	112
<b>8</b>	<b>RESEARCH TRENDS IN POLYMER COMPOSITES</b>	<b>116</b>
	8.1. Introduction	116
	8.2. FDM of Thermoplastic Composites	117

	8.3. FDM of ABS Composites	118
	8.3.1. Carbon based Reinforcement	118
	8.3.2. Graphene based Reinforcement	120
	8.4. FDM of PLA Composites	121
	8.5. FDM of Polyamide	125
	8.6. FDM of Polypropylene	127
	8.7. FDM of Polyethylene	129
	8.8. FDM of Polyether Ether Ketone (PEEK)	131
<b>9</b>	<b>RECENT TRENDS IN FUSED DEPOSITION MODELING OF METALS</b>	<b>132</b>
	9.1. Introduction	132
	9.2. Disadvantages of Metal Additive Manufacturing	132
	9.3. Metal Extrusion Process	132
	9.4. Key Considerations	134
	9.4.1. Existing Designs May Not be Directly Transferable	134
	9.4.2. Geometric Complexity is as Asset	134
	9.4.3. Start by Defining the Basic Requirements	134
	9.4.4. Always Use Minimum Support Structures	134
	9.4.5. Post-processing is Always Required	134
	9.5. Creating Metal Parts by Fused Deposition Modeling and Sintering	135
	9.5.1. Experimental Methods	136
	9.5.2. Microstructure Analysis	136
	9.5.3. Hardness and Tensile Strength	137
	9.6. Fabrication of Iron - Nylon Composite Filament	138

	9.6.1. Tensile Properties	140
	9.7. Metal-Polymer Composite Filament	142
	9.7.1. Effects of Viscosity on Tensile Properties	143
	9.7.2. Effects of Fill Density on Tensile Properties	145
	9.7.3. Effect of Metal Particle Infill on Tensile Properties	145
	9.7.4. Effect of Metal Particle Infill on Thermal Conductivity	147
	9.8. Polymer Metal Composite (PE/Cu)	148
	9.8.1. Flexural Strength Test	151
<b>10</b>	<b>FUTURE RESEARCH SCOPE AND CONCLUSION</b>	<b>154</b>
	10.1. Future Research Scope	154
	10.2. Conclusion	159
	<b>REFERENCES</b>	<b>160</b>

## LIST OF FIGURES

S. NO	DESCRIPTION	PAGE NO
1.1	Component Manufactured by Additive Manufacturing Technique	01
1.2	Steps in Part Creation in Additive Manufacturing Process	02
1.3	Metal Bracket Manufactured by Additive Manufacturing Process	03
1.4	Graphical Representation of François Willème (1830-1905)	03
1.5	Complex Automotive Component Manufactured by AM Process	05
1.6	Product Customization	06
1.7	A 3D Printing Equipment	07
1.8	Example for Complex Design	09
1.9	A Prototype Model	09
1.10	3D Printed Bio Part	11
1.11	3D Printed Prosthetic ARM	13
1.12	Example for Components Manufactured by AM Technique	14
1.13	Additive Fuel Nozzle	14
1.14	Additive Manufacturing in Tooling	15
1.15	Expansion of The Lewis Grand Hotel in the Philippines	15
2.1	Types of Additive Manufacturing Processes	16
2.2	An Example for VAT Photo Polymerization Process	17
2.3	Types of Processes in VAT Photo Polymerization	18
2.4	Component Manufactured by Stereolithography Process	19
2.5	Schematic Representation of Material Extrusion Process in AM	20
2.6	Different Types of Material Extrusion based AM Process	20
2.7	Powder Bed Fusion Process	22

2.8	Different Variants in Powder Bed Fusion Process	22
2.9	Cranial Implant Manufactured by PBF Process	23
2.10	Schematic Representation of Material Jetting Process	24
2.11	Types of Material Jetting Process	25
2.12	Schematic Representation of Poly Jet Printing Process	26
2.13	Ceramic Components Manufactured by Nano Particle Jetting	26
2.14	Drop on Demand Material Jetting Process	27
2.15	Schematic Representation of Binder Jetting Process	28
2.16	The M5 Screws 3D printed Using Binder Jetting Process	29
2.17	Post Processing Steps in Binder Jetting Processes	30
2.18	Example of Components Manufactured by Binder Jetting Process	31
2.19	Schematic Representation of Direct Energy Deposition Process	32
2.20	Illustrates How DED Method is Used for Repair of Gear Teeth	33
2.21	Schematic Representation of Sheet Lamination Process	34
3.1	Illustrative Diagram of FDM	35
3.2	Illustrates the Market Size of Various 3D Printing Processes	36
3.3	Schematic Representation of FDM Process	37
3.4	FDM Extruder Assembly Setup	38
3.5	Extruder Hotend	38
3.6	Angled Fan Mount on Extruder Hotend	39
3.7	Thermal Bar Used in FDM	39
3.8	Heating Block Made of Aluminium	40
3.9	Brass Nozzles Used in FDM Processes	40
3.10	Schematic Representation of Gear Type Extruder	41
3.11	Schematic Representation of Direct and Bowden Extrusion	42

3.12	Schematic Illustration of Cartesian Type 3D Printer	43
3.13	3D Delta Metal Printer	44
3.14	Commercial Polar Type FDM 3D printer	45
3.15	Robotic ARM 3D Printer	46
3.16	Shows a Component being Printed on a Glass Print Bed	47
3.17	Simple 3D Printer Setup with Various Electronic Components	49
4.1	Filament Materials Used for Printing	50
4.2	Decision Criteria for Material Selection	51
4.3	A 3D Printing Filament	52
4.4	3D Printed PLA Sample	53
4.5	Process of Laying ABS Layer by Layer	54
4.6	Component Printed from ABS Filament in a FDM Process	55
4.7	Custom Assembly Pallet Made from PC	56
4.8	Lid Made from PET on FDM Mold	58
4.9	PETG Filament and 3D Printed Vacuum Nozzle	59
4.10	3D Print with PETG	60
4.11	Thermoplastic Polyurethane Part Manufactured with FDM	61
4.12	UV Resistant Component Printed from ASA Thermoplastic	63
4.13	Ultem 9085 Filament Used for 3D Printing in FDM	65
4.14	Automotive Component Made from Ultem Filament	66
5.1	Simplified Process flow Chart of FDM Including different Types of Software's Used	68
5.2	Illustrating Raster Width, Air Gap and Raster Angle	69
5.3	Schematic Representation of Various Types of Air Gaps	69
5.4	Various Raster Orientations in Fused Deposition Modeling	70

5.5	Surface Finish of a FDM Printed ABS Component	71
5.6	Tensile Strength of FDM with Injection Moulded ABS Part with Zero Air Gap	72
5.7	Tensile Strength of FDM with Injection Moulded ABS Part with Negative Air Gap	73
5.8	Failure Mode of Specimens with Various Raster Orientations	73
5.9	Scanning Electron Microscope Pictures of Fractured Surface with Negative Air Gap	74
5.10	Average Stress-strain Behavior of Ten [+45/-45] Flat Orientation ABS Samples	76
5.11	Compression Specimens with Two different Build Directions	76
5.12	Compressive Strength of Specimens with different Build Direction Compared with Injection Molded ABS	77
5.13	3-point Flexural Loading System	78
6.1	Single PLA Polymer Monomer Unit	80
6.2	PLA/HA Nano Composites by FDM 3D Printer	81
6.3	Schematical Representation Showing the Yoda Sample While Printing	84
6.4	Overhang Printing Defects Due to Uncontrolled Flow of Polymer	85
6.5	(a) Shear (Circles) and Complex (Triangles) Viscosity for White (Open Symbols) and Green (Full Symbols) polylactide (PLA). (b) Elastic (Circles) and Viscous (Triangles) Modulus for White (Open Symbols) and Green (Full Symbols) PLA	86
6.6	WITBOX Printer and PLA Filament	87
6.7	Surface Roughness Measuring Setup	88
6.8	Printed Samples for Experiment	88
6.9	Details of Measurement Procedure	90
6.10	Geometrical Parameters of DB Specimen	92

6.11	Printing Orientation of 3D Specimen	92
6.12	Tensile Specimen Before (a) and After (b) Tensile Test	93
6.13	Geometrical Data (In MM) of the Parallelepiped-shaped Specimen for the Compression Tests	94
6.14	Printing Plane for Parallelepiped Specimens for Compression Tests	95
6.15	Stress-strain Compression Test Curves for the Test Specimens	96
7.1	FDM Samples Built Direction	99
7.2	Macroscopic Views of Samples (a–c) and Fracture Surfaces (d–f).	102
7.3	Comparison of Compression Properties for Solid and Sparse Specimens	105
7.4	Yield Strength of Horizontal Built and Vertical Built Solid Specimens	105
7.5	Interaction of Build Direction and Raster Angle on Yield Strength of Solid Specimens	107
7.6	Sample Stress-strain Curves for Horizontal and Vertical Build Specimens	107
7.7	Physical Model Horizontal Build Solid Model with (0°, 90°) and (45°, -45°) Raster Angles	108
7.8	Physical Model Vertical Build Solid Model with (0°, 90°) and (45°, -45°) Raster Angles	108
7.9	Effect of Air Gap on Yield Strength for Solid Specimens	109
7.10	Stress-strain Curves at different Air Gaps for Horizontal-build and Vertical-build Specimens, Where the Raster Angle was (0°, 90°)	109
7.11	Graph Of Average Stress-Strain Results for Compression Test	110
7.12	Graph of Average Stress-strain Results for Flexural Test	112
7.13	Light Microscope image Showing Dense Sample Built in Flat Direction With 0° Layer Orientation	113

7.14	Light Microscope Image Showing Samples with Flaws when Built in Flat Direction with +45°/- 45° Layer Orientation	114
7.15	Light Microscope Image of Incomplete Fills for the Sample with the 90° Layer Orientation Printed in the Edge Direction	114
8.1	Schematic of FDM Process Using Continuous Fiber Reinforcement a) In-Nozzle Impregnation b) Printing with Two Separate Nozzle	117
8.2a	The Presence of Voids in the FDM Printed Composite Parts a) ABS+10 wt. % Short Carbon Fibers of 150 μm Length	119
8.2b	The Presence of Voids in the FDM Printed Composite Parts b) Neat ABS c) ABS+10 wt % Short Carbon Fibers of 0.35 mm Length	119
8.3	Microstructure of 3D Printed (a) PLA and (b) PLA-graphene Parts. Fractured Cross-sectional. Microstructure of 3D Printed (c) PLA and (d) PLA-graphene	122
8.4	The Interface is Locally Heated to Allow for Polymer Diffusion and Increased Fracture Strength	123
8.5	a) Thermoplastic PLA Filament Coated with CNT-rich Layer b) After the Microwave Heating, The Interface is Locally Heated to Allow for Polymer Diffusion and Increased Fracture Strength	124
8.6	Illustration of the Failure Mechanism of 3D Printed Continuous Fiber Reinforced Composites, Tensile Behavior: a) and b), Flexure Behavior of Carbon FRTP: c) and d), Flexure Behavior of Glass FRTP: e) and f)	127
8.7	FDM Printed Polypropylene a) with Distortion and Decoupling from the bed, b) Reduced Distortion and Improved Adhesion to the Bed at Optimal Printing Parameters	128
8.8	a) Shrinkage of the FDM Printed Polypropylene Part b) Reduction in Shrinkage of PP with 30 wt%. Natural Fiber Hemp	129

8.9	SEM images of the Surface (left) and Cross Sectional area (Right) of HDPE Specimens Obtained by FFF (1–4) and by Injection Molding, Respectively (5–6). In Contrast to Regular Printing (1 and 2) FFF with Gradually Adjusted Filling Amount (3–4) is Clearly Superior in Terms surface Quality and Preventing Defect Formation	130
9.1	Metal Parts Manufactured by Fused Deposition Modeling	133
9.2	Schematic Illustration of FDMS	135
9.3	SEM Images of the Cross-sections of a) Filament and b) Green Part	136
9.4	Optical Microscopy of Microstructure in FDMS 316L Part	137
9.5	Filament Produced by Iron – Nylon Composite	139
9.6	Comparison of Stress Strain Curves for Iron Nylon Composites	141
9.7	Examples of Parts and Inserts Produced on the FDM System	142
9.8	DSC Analysis Result of ABS	143
9.9	Viscosity ( $\mu$ ) of ABS at different Temperatures	144
9.10	Tensile Properties of the 3D Structures Manufactured by ABS at Different Temperatures	144
9.11	Tensile Strength of ABS Specimens with Increasing Fill Density	145
9.12	Stress–strain Curves for ABS with Copper Particles	146
9.13	Stress–strain Curves for ABS with Iron Particles	146
9.14	Microscopic Structure of Cutting Plane of Specimens: (a) ABS-Cu10wt% (b) ABS-Cu30wt%	147
9.15	Coefficient of Thermal Expansion by Changing the Copper Content	147
9.16	Thermal Conductivity of ABS-Cu Filaments as a Function of Copper Content	148
9.17	Filament Production Line	149
9.18	Schematic Illustration of Filament Production Dies	149

9.19	(a, b) Distortion of PE-based Specimens	150
9.20	Flexural Strength Test	152
9.21	Flexural Strength Test Results	152
9.22	Schematic Representation of Bending Test	153

## LIST OF TABLES

<b>S. NO</b>	<b>DESCRIPTION</b>	<b>PAGE NO</b>
1.1	Historical Developments in Additive Manufacturing Process	04
1.2	Difference Between Additive and Traditional Process	08
5.1	Shear Modulus, Yield Strength, and Ultimate Strength Average Values with 95% CIs for the ABS	75
5.2	Flexural Test Results	79
7.1	Average Value of Densities and Porosity of Printed Parts for the Different Build Orientation	99
7.2	ANOVA Test for Tensile Properties	100
7.3	Results of Tensile Properties of Ultem9085 Samples Built According the Three Building Directions	101
7.4	Factors and Levels for Solid Build Style	104
7.5	Factors and Levels for Sparse Build Style	104
7.6	Effects Table from JMP 11 for Solid Specimen	106
7.7	Average Results of Compression Extension, Compressive Strength, Compressive Strain and E-modulus	111
7.8	Average Results for Three-point Bending Load	112
9.1	Tensile Modulus, Tensile Stress at Peak and Tensile Strain at Break	140
9.2	The Volumetric Flow Rate and Viscosity of ABS at Various Temperatures	143
9.3	Tensile Properties of the Specimen	146
9.4	Optimum Parameter for Filament Production	149
9.5	Optimum Condition for Printing	151
10.1	Road Map for Future Research	158
