

TABLE OF CONTENTS

CHAPTER NO	TITLE	PAGE NO
	CHAPTER-I	1
1	Introduction to Robotics and Robot Building Blocks	1
1.1	Chapter Introduction: Why This Topic Matters	1
1.2	What is a Robot?	1
1.3	Robots, Automation, and AI (with Examples)	1
1.4	Different Types of Robots	2
1.5	The Parts of a Robot: The Building Blocks	2
1.6	Robot Development Pipeline (How Robots are Built in Real Projects)	3
1.7	Safety and Ethics in Robotics (India-Focused Context)	3
1.8	Worked Example 1: Choosing a Motor for a Small Robot (Step-by-step)	4
1.9	Hands-on Lab Activity: DC Motor + PWM Speed Control + Sensor Read	5
1.10	Mini-Project (Chapter 1): Design a Line Follower Robot (Concept + Plan)	6
1.11	Real-world Case Study: Warehouse Robots in Indian Logistics	6
1.12	Common Mistakes and How to Avoid Them	7
1.13	Summary	7
1.14	Key Terms Glossary	7
1.15	Exercises with Answer Key	8
1.16	Rubric for Evaluation	8

	CHAPTER-II	10
2	Mechanical Foundations for Robots	10
	2.1 Chapter Introduction: Why This Topic Matters	10
	2.2 Key Concepts	10
	2.2.1 Links, Joints, and Degrees of Freedom (DoF)	10
	2.2.2 Practical Example (India UG Lab)	10
	2.2.3 Stability and Center of Mass (CoM)	11
	2.2.4 Wheel Types and Mobility Choices	11
	2.2.5 Traction, Friction, and Slippage	11
	2.2.6 Gears, Gear Ratio, and Torque-Speed Tradeoff	11
	2.3 Robot Stability (CoM and Support Polygon)	12
	2.4 Worked Example (Step-by-step): Can My Robot Climb a Ramp?	12
	2.5 Hands-on Lab Activity: Build a Strong Chassis + Measure Stability	13
	2.6 Mini-Project (Chapter 2): Design a Chassis for a Delivery Robot Prototype	13
	2.7 Real-world Case Study: Chassis Design in Indian Agricultural Robots	14
	2.8 Common Mistakes and How to Avoid Them	14
	2.9 Summary	15
	2.10 Key Terms Glossary	15
	2.11 Exercises (Easy/Medium/Hard) + Answer Key	15
	2.12 Rubric for Evaluation (Chapter 2 Lab + Mini-Project)	16
	CHAPTER-III	17
3	Actuators and Drives	17

3.1	Chapter Introduction: Why This Topic Matters	17
3.2	Important Ideas Explained with Examples	17
3.2.1	What is an Actuator?	17
3.2.2	Types of Motors Used in Robotics (UG Focus)	17
3.2.3	Torque, Speed, and Power (The Most Important Tradeoff)	18
3.2.4	Why Motor Drivers Are Needed	18
3.2.5	PWM Speed Control (Practical Understanding)	19
3.2.6	Torque–Speed Relationship	19
3.3	Torque–Speed Relationship	19
3.4	Worked Example (Step-by-step): Selecting a DC Geared Motor for a Robot	20
3.5	Hands-on Lab Activity: Motor Driver + PWM Speed Control + Direction Test	21
3.6	Mini-Project (Chapter 3): Build a Speed-Controlled Two-Wheel Drive Base	22
3.7	Real-world Case Study: Differential Drive in Delivery Robots	23
3.8	Common Mistakes and How to Avoid Them	23
3.9	Summary	23
3.10	Key Terms Glossary	23
3.11	Exercises (Easy/Medium/Hard) + Answer Key	24
3.12	Rubric for Evaluation (Chapter 3 Lab + Mini-Project)	24
	CHAPTER-IV	26
4	Sensors and Interfacing	26
4.1	Chapter Introduction: Why This Topic Matters	26

4.2	Key Concepts Explained with Examples	26
4.2.1	What is a Sensor? Measurement vs Reality	26
4.2.2	Types of Sensors in Robotics (UG Practical Set)	26
4.2.3	Sensor Output Types: Analog vs Digital	27
4.2.4	Important Interfacing Protocols (Beginner-friendly)	27
4.2.5	Calibration and Thresholding	27
4.2.6	Filtering and Debouncing (Noise Handling)	27
4.3	Sensor Interfacing Map (Analog, Digital, I2C)	28
4.4	Worked Example (Step-by-step): Ultrasonic Distance Calculation	29
4.5	Hands-on Lab Activity: Interfacing a Line Sensor + Ultrasonic + Serial Monitor	30
4.6	Mini-Project (Chapter 4): Obstacle-Aware Line Follower	30
4.7	Real-world Case Study: Sensor Fusion in Two- Wheeler Delivery Robots	31
4.8	Common Mistakes and How to Avoid Them	31
4.9	Summary	32
4.10	Key Terms Glossary	32
4.11	Exercises + Answer Key	32
4.12	Rubric for Evaluation (Chapter 4 Lab + Mini- Project)	33
	CHAPTER-V	34
	Embedded Controllers for Robotics (Arduino, ESP32, Raspberry Pi)	34
5.1	Chapter Introduction: Why This Topic Matters	34
5.2	Key Concepts Explained with Examples	34

	5.2.1	Microcontroller vs Single-Board Computer (SBC)	34
	5.2.2	Common Robotics Controllers in UG Labs	34
	5.2.3	GPIO, ADC, PWM, Interrupts (Core Controller Features)	35
	5.2.4	Writing Good Firmware: Loop Timing and State Machines	35
	5.2.5	Debugging Tools: Serial Monitor, LEDs, Logging	36
5.3		Choosing the Right Controller (Arduino vs ESP32 vs Raspberry Pi)	36
5.4		Worked Example (Step-by-step): Selecting Controller for a Robot Project	37
5.5		Hands-on Lab Activity: Build a “Robot Brain” Test Program (Non- Blocking)	38
		Mini-Project (Chapter 5): Bluetooth/Wi-Fi	
5.6		Controlled Robot (ESP32 Preferred)	38
5.7		Real-world Case Study: Controller Architecture in Autonomous Mobile Robots	39
5.8		Common Mistakes and How to Avoid Them	39
5.9		Summary	40
5.10		Key Terms Glossary	40
		CHAPTER-VI	42
6		Robot Modeling and Coordinate Frames	42
	6.1	Chapter Introduction: Why This Topic Matters	42
	6.2	Key Concepts Explained with Examples	42
	6.2.1	What is a Coordinate Frame?	42
	6.2.2	Position and Orientation in 2D	42

	6.2.3	Translation and Rotation	43
	6.2.4	Rotation Matrix in 2D (Intuitive Meaning)	43
	6.2.5	Homogeneous Transformation Matrix (The Robotics Standard)	43
	6.2.6	Why Multiple Frames Are Needed (Sensor to Robot to World)	43
	6.3	Coordinate Frames in a Mobile Robot (World → Robot → Sensor)	44
	6.4	Worked Example (Step-by-step): Convert a Point from Robot Frame to World Frame	45
	6.5	Hands-on Lab Activity: Frame Thinking with a Robot Sketch + Simple Calculation	45
	6.6	Mini-Project (Chapter 6): Sensor-to-World Mapping for a Simple Obstacle Plot	46
	6.7	Real-world Case Study: Coordinate Frames in Self- Driving and Warehouse Robots	47
	6.8	Common Mistakes and How to Avoid Them	47
	6.9	Summary	47
	6.10	Key Terms Glossary	47
	6.11	Exercises + Answer Key	48
	6.12	Rubric for Evaluation (Chapter 6 Lab + Mini- Project)	48
		CHAPTER-VII	49
7		Forward Kinematics of Robotic Arms	49
	7.1	Chapter Introduction: Why This Topic Matters	49
	7.2	Key Concepts Explained with Examples	49
	7.2.1	Manipulators and Joint Types	49
	7.2.2	Kinematic Chain and Degrees of Freedom (DoF)	49

	7.2.3	What Forward Kinematics Does	49
	7.2.4	Planar 2-Link Arm Geometry (Most UG-Friendly FK)	50
	7.2.5	DH Parameters (Intro Level, Practical)	50
7.3		2-Link Planar Robotic Arm (Angles and Link Lengths)	50
7.4		Worked Example (Step-by-step): Forward Kinematics of a 2-Link Arm	51
7.5		Hands-on Lab Activity: Build a 2-Servo Arm and Verify FK	52
7.6		Mini-Project (Chapter 7): Build a 2-DOF Drawing Arm (Plotter)	53
7.7		Real-world Case Study: Pick-and-Place in Manufacturing	54
7.8		Common Mistakes and How to Avoid Them	54
7.9		Summary	54
7.10		Key Terms Glossary	54
7.11		Exercises + Answer Key	55
7.12		Rubric for Evaluation (Chapter 7 Lab + Mini-Project)	55
		CHAPTER- VIII	57
8		Inverse Kinematics (IK)	57
	8.1	Chapter Introduction: Why This Topic Matters	57
	8.2	Key Concepts Explained with Examples	57
	8.2.1	What Inverse Kinematics Does	57
	8.2.2	Reachability and Workspace	57
	8.2.3	Two Solutions: Elbow-Up and Elbow-Down	58
	8.2.4	Geometric IK for 2-Link Planar Arm (Core Formula)	58

	8.2.5	Singularities (Beginner Intuition)	58
	8.2.6	Numerical IK (Concept Only)	59
	8.3	Elbow-Up vs Elbow-Down IK Solutions (2-Link Arm)	59
	8.4	Worked Example (Step-by-step): IK for a 2-Link Planar Arm	60
	8.5	Hands-on Lab Activity: IK Point-to-Point Motion (Servo Arm)	61
	8.6	Mini-Project (Chapter 8): “Pick Points” Robot Arm Challenge	62
	8.7	Real-world Case Study: IK in Industrial Robot Arms	63
	8.8	Common Mistakes and How to Avoid Them	63
	8.9	Summary	63
	8.10	Key Terms Glossary	63
	8.11	Exercises + Answer Key	63
	8.12	Rubric for Evaluation (Chapter 8 Lab + Mini-Project)	64
		CHAPTER IX	65
9		Mobile Robot Kinematics (Differential Drive)	65
	9.1	Chapter Introduction: Why This Topic Matters	65
	9.2	Key Concepts Explained with Examples	65
	9.2.1	Differential Drive Structure	65
	9.2.2	Linear and Angular Velocity of the Robot	65
	9.2.3	Special Motions: Straight, In-Place Turn, Circular Turn	66
	9.2.4	Wheel Angular Speed to Linear Speed	66
	9.2.5	Odometry (Intro): Estimating Robot Pose from Wheels	66

	9.3	Differential Drive Geometry (v_L , v_R , L)	67
	9.4	Worked Example (Step-by-step): Compute v and ω	67
	9.5	Hands-on Lab Activity: Straight, Turn, Circle Experiments	68
	9.6	Mini-Project (Chapter 9): Drive a Square Path (Odometry-Based)	69
	9.7	Real-world Case Study: Differential Drive Robots in Warehouses	69
	9.8	Common Mistakes and How to Avoid Them	70
	9.9	Summary	70
	9.10	Key Terms Glossary	70
	9.11	Exercises + Answer Key	70
	9.12	Rubric for Evaluation (Chapter 9 Lab + Mini-Project)	71
		CHAPTER X	72
10		Control Systems for Robotics (Open-Loop, Closed-Loop, PID)	72
	10.1	Chapter Introduction: Why This Topic Matters	72
	10.2	Key Concepts Explained with Examples	72
		10.2.1 Open-Loop vs Closed-Loop Control	72
		Control System Components	
	10.2.2	(Standard Loop)	72
	10.2.3	Proportional (P) Control	73
	10.2.4	Integral (I) Control	73
	10.2.5	Derivative (D) Control	73
	10.2.6	PID Controller (Most Used in UG Robotics)	73
	10.2.7	PID Tuning (Practical Methods)	74
	10.3	Worked Example (Step-by-step): Simple P	75

	Controller for Motor	
10.4	Hands-on Lab Activity: PID Motor Speed Control Using Encoders (UG Level)	75
10.5	Mini-Project (Chapter 10): PID-Based Smooth Line Follower	76
10.6	Real-world Case Study: Control in Drones and Balancing Robots	76
10.7	Common Mistakes and How to Avoid Them	77
10.8	Summary	77
10.9	Key Terms Glossary	77
10.10	Exercises + Answer Key	77
10.11	Rubric for Evaluation (Chapter 10 Lab + Mini-Project)	78
	CHAPTER- XI	79
11	Robot Perception Basics (Noise, Filtering, Sensor Fusion, Vision Intro)	79
11.1	Chapter Introduction: Why This Topic Matters	79
11.2	Key Concepts Explained with Examples	79
	11.2.1 Measurement Noise, Bias, and Drift	79
	11.2.2 Why Filtering is Needed	79
	11.2.3 Moving Average Filter (Most Common UG Filter)	80
	11.2.4 Median Filter (Good for Outliers)	80
	11.2.5 Sensor Fusion (Beginner Meaning)	80
	11.2.6 Complementary Filter (Very UG-Friendly)	80
	11.2.7 Kalman Filter (Conceptual Intro Only)	81
	11.2.8 Vision Perception (Intro Level)	81
11.3	Worked Example (Step-by-step): Moving Average Filtering	82

11.4	Hands-on Lab Activity: IMU Logging + Complementary Filter (Beginner)	82
11.5	Mini-Project (Chapter 11): “Stable Heading” Robot Using Sensor Fusion	83
11.6	Real-world Case Study: Perception in Self-Driving and Mobile Robots	84
11.7	Common Mistakes and How to Avoid Them	84
11.8	Summary	84
11.9	Key Terms Glossary	84
11.10	Exercises + Answer Key	85
11.11	Rubric for Evaluation (Chapter 11 Lab + Mini-Project)	85
	CHAPTER XII	86
12	Localization and Mapping (Odometry, Errors, Landmarks, Mapping Basics, SLAM Overview)	86
	12.1 Chapter Introduction: Why This Topic Matters	86
	12.2 Key Concepts Explained with Examples	86
	12.2.1 What is Localization?	86
	12.2.2 Odometry: Dead Reckoning Using Encoders	86
	12.2.3 Why Odometry Drifts (Error Sources)	87
	12.2.4 Landmark-Based Localization (Correction Idea)	87
	12.2.5 Mapping Basics: What is a Map?	87
	12.2.6 Occupancy Grid Concept	87
	12.2.7 SLAM Overview (Beginner Explanation)	88
12.3	Worked Example (Step-by-step): Odometry Pose Update	89
12.4	Hands-on Lab Activity: Measure Odometry Drift in	90

	Real Robot	
	12.5 Mini-Project (Chapter 12): Build a Simple Room Map Using Sensor Points	90
	12.6 Real-world Case Study: AMRs in Warehouses	91
	12.7 Common Mistakes and How to Avoid Them	91
	12.8 Summary	92
	12.9 Key Terms Glossary	92
	12.10 Exercises + Answer Key	92
	12.11 Rubric for Evaluation (Chapter 12 Lab + Mini-Project)	93
	CHAPTER-XIII	94
13	Path Planning and Obstacle Avoidance (Reactive + A* + Potential Fields)	94
	13.1 Chapter Introduction: Why This Topic Matters	94
	13.2 Key Concepts Explained with Examples	94
	13.2.1 Reactive vs Global Planning	94
	13.2.2 Common Map Representation for Planning: Grid Map	95
	13.2.3 Bug Algorithms (Classic Obstacle Avoidance)	95
	13.2.4 A* Path Planning (Most Important UG Planner)	95
	13.2.5 Heuristics (Simple and Practical)	95
	13.2.6 Potential Field Method (Intuitive Avoidance)	96
	13.3 Worked Example (Step-by-step): A* on a Small Grid	97
	13.4 Hands-on Lab Activity: Reactive Obstacle Avoidance with Ultrasonic Sensor	97
	13.5 Mini-Project (Chapter 13): Grid-Based A* Planner + Following the Path	98
	13.6 Real-world Case Study: Path Planning in Hospital	98

	Delivery Robots	
	13.7 Common Mistakes and How to Avoid Them	99
	13.8 Summary	99
	13.9 Key Terms Glossary	99
	13.10 Rubric for Evaluation (Chapter 13 Lab + Mini-Project)	100
	CHAPTER- XIV	101
14	ROS Fundamentals (Beginner) — Nodes, Topics, Messages, and a First Robot Workflow	101
	14.1 Chapter Introduction: Why This Topic Matters	101
	14.2 Key Concepts Explained with Examples	101
	14.2.1 What ROS Is (In Simple Words)	101
	14.2.2 ROS Architecture: Nodes, Topics, Messages	101
	14.2.3 Services and Actions (What They are Used for)	102
	14.2.4 ROS 1 vs ROS 2 (Beginner Comparison)	102
	14.2.5 Common Robotics Topics You Will See	102
	14.2.6 Typical UG Robot Architecture with ROS	102
	14.3 Worked Example (Step-by-step): Simple Publisher-Subscriber Concept	104
	14.4 Hands-on Lab Activity: Run Your First ROS 2 Nodes (Beginner)	104
	14.5 Mini-Project (Chapter 14): Teleop Control of a Robot Using /cmd_vel	105
	14.6 Real-world Case Study: Why ROS is Used in Industry	106
	14.7 Common Mistakes and How to Avoid Them	106
	14.8 Summary	106
	14.9 Key Terms Glossary	106

	14.10 Exercises + Answer Key	107
	14.11 Rubric for Evaluation (Chapter 14 Lab + Mini-Project)	107
	CHAPTER XV	108
15	Applications and Capstone Project	108
	15.1 Chapter Introduction: Why This Topic Matters	108
	15.2 Robotics Applications in India (Practical Examples)	108
	15.3 System Integration Checklist (Mechanical + Electrical + Software)	109
	15.3.1 Mechanical Checklist	109
	15.3.2 Electrical Checklist	109
	15.3.3 Software Checklist	109
	15.4 Testing, Validation, and Debugging Strategy	110
	15.4.1 Testing in Levels (Engineer Approach)	111
	15.4.2 Useful Debug Methods	111
	15.4.3 Validation Metrics (Simple and Practical)	111
	15.5 Documentation: Report + Git + Demo Video	111
	15.6 Capstone Project Options (Choose 1)	112
	15.7 Capstone Project Template (What to Write and Build)	112
	15.7.1 Project Structure (Recommended)	112
	15.8 Capstone Evaluation Rubric (Detailed)	113
